

# An exciting investment opportunity in bio-pesticides

**Vision:** BioCloud will provide herbal-based organic vapor solutions for healthier farming and living.

The company developed a bio-pesticide that is based on natural plant extracts made up of “green” molecules that both control and repel insect pests, while leaving the crops safe for consumption and the environment untouched.

The company has finished proof of concept and has a product ready to be taken through regulation, tested in larger field trials and to be produced on a large scale. The company has a patent filed for National Phase in the USA and Israel.

## Key features at a glance

Natural ingredients

Easy application

Plant extracts

Slow release formulation

Highly volatile ingredients

No contact with soil or water

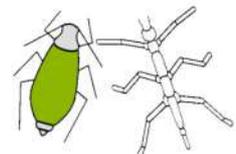

Residue free

Mixture & packaging compostable

Works on sucking and eating pests

No spraying

# An exciting investment opportunity in bio-pesticides

## The market:

The global green pest control market is valued at \$5B and is expected to reach \$10B by 2025. The Insect repellent market is valued at \$5.6B and is estimated to reach \$9.6B by 2026.

## The opportunity:

We are looking for ~\$2M to enable us to take the next step towards regulation, larger field trials and building mass production facilities.

BioCloud offers a safe, sustainable and efficacious end-to-end platform that meets each users' need. BioCloud 618 also repels Mosquitoes and controls Little Red Ants.

## Key benefits:

The product, BioCloud 618, holds similar efficacy levels to currently available chemical-pesticides yet leave no toxic residues on the treated crops.

BioCloud 618 is a herbal-based organic pesticide that can be used by farmers, pesticide operators and more, for highly effective, safe and reliable plant protection.

The plant extract mix has excellent vapor activity as both an insect repellent and as an insecticide with similar efficacy levels to conventional chemical-based pesticides, while leaving the crops toxic-free.

BioCloud 618 demonstrates high reliability as the product is certified organic and can guarantee it will not be banned like 40% of chemical-based pesticides. Along the same lines, pest resistance to pesticides does not occur with BioCloud 618, providing farmers with a sustainable option for crop protection that is dependable long-term.

The product saves headcount costs for personnel that need to perform spraying activities.

With the product's various application methods, farmers can control exactly which crop will be exposed to the product by simply placing the container at the base of the crop plant and opening the lid.

Want to be part of the next generation of green insect control? Please get in touch – we look forward to talking with you!
